PUBLIC HEALTH REPORTS.

UNITED STATES.

[Reports to the Surgeon-General Public Health and Marine-Hospital Service.]

Summary of work in Chinatown, San Francisco, for week ended July 18, 1903.

The following is received from Passed Assistant Surgeon Blue, at San Francisco, under date of July 20, being record of work in Chinatown for week ended July 18, 1903:

Buildings reinspected	281
Rooms	2,338
Persons inspected	2,389
Sick	34
Sick prescribed for at Oriental Dispensary	8
Dead examined	13
Deaths suspicious of plague	1
Necropsies	2
Rats examined bacteriologically	82
Places limed and disinfected	845
Streets flushed	2
Times streets swept	3
Sewers flushed	17
Plumbing nuisances abated and undergoing abatement	4
Total number of plumbing inspections	22
Number of new complaints filed	12

Report on rats from city wharf and Chinese, Japanese, and Latin quarters, examined during the week ended July 11, 1903.

The following is received from Assistant Surgeon Currie, under date of July 11, through Passed Assistant Surgeon Blue:

Number of rats caught alive	76
Number found dead	2
Number showing lesions of phosphorus poisoning	0
Number showing pest infection	0

Measures for checking smallpox in northern Maine (Canadian border).

Surgeon Kalloch reports from Portland, Me., July 14, as follows: Acting Asst. Surg. Luther Mason reports from Fort Kent, Me., that

during the last ten days there have been 24 cases of smallpox in the vicinity of Fort Kent, Me., and that four houses have been disinfected. Two houses are now under quarantine restrictions.

Inspection service, Mexican border.

Laredo, Tex.—Acting Assistant Surgeon Hamilton reports, July 12, as follows:

Week ended July 11, 1903: Number of passenger trains entering from Mexico inspected, 14; persons on trains entering from Mexico inspected, 601; immigrants inspected, 38; immigrants certified, 1; immigrants deported, 1; immigrants vaccinated upon entry, 13.

Danger of transmission of yellow fever to Monterey from Tampico.

Acting Assistant Surgeon Hamilton, at Laredo, Tex., reports, July 10, as follows:

Referring to danger of yellow fever reaching Monterey from Tampico, I quote telegram received of Consul-General Hanna at Monterey, dated July 10:

Have made careful investigation. Am thoroughly convinced that everything is clean as far south as Victoria. No cases of yellow fever known in Victoria nor Monterey. Two quarantines between here and Tampico.

I have written the consul at Victoria to give me early information should cases occur there.

The death of a railroad official at Cardenas of yellow fever acquired in Tampico is reported by the press. Cardenas is 150 miles from Tampico on railroad between Tampico and San Luis Potosi. There is no quarantine on this line of travel. San Luis Potosi is claimed to be noninfectible. It has an altitude of 6,000 feet. Monterey may be reached via San Luis Potosi from Tampico in thirty-nine hours without quarantine inspection, which includes a delay at San Luis Potosi of twelve hours on account of trains not making connection. Therefore persons infected at Tampico may reach Monterey notwithstanding the double quarantine on the direct route. A. A. Surg. John Frick, of Tampico, who passed through here a short time ago, informed me that the quarantine inspection consisted in taking the temperature of passengers and a change of train crews. Persons having normal temperature are allowed to pass. Time consumed from Tampico to Monterey is thirteen and one-half hours.

Two families of railroad employees between Tampico and Monterey have passed through here. The employees believed that yellow fever would soon break out in Monterey and they were afraid to remain there. They had been running between Monterey and Tampico. They informed me that crews of freight trains ran through to Tampico, only the passenger crews being changed at quarantine station.

[Inclosure.]

Precautions at Victoria, Mexico, against importation of yellow fever—Sanitary measures.

Consular Agent Storms reports, July 10, as follows: There is not a case of yellow fever in or near Victoria, nor has there been since 1898. The precautions taken by the State government are, first, a strict inspection of all passengers and trainmen at the time of leaving Tampico; second, a complete change of passenger trains and crews at Gonzales Station, which is 61 miles out from Tampico and 87 miles from Victoria; third, another examination of each passenger and crew of trains before entering Victoria; fourth, a ten days' surveillance of each person stopping at Victoria by a doctor. In addition to this, they have completed and ready for use a hospital arranged so as to entirely exclude the mosquito. The general sanitary condition of Victoria is good. The city has been divided into districts, each district being under the immediate supervision of a physician. A house-to-house inspection has been and is being made, and necessary measures are being enforced to bring about a sanitary condition.

Statistical reports of States and cities of the United States—Yearly and monthly.

CALIFORNIA.—Reports to the State board of health, for the month of May, 1903, from 45 towns, having an aggregate estimated population of 976,258, show a total of 1,260 deaths, including diphtheria 22, enteric fever 12, measles 7, scarlet fever 9, whooping cough 8, and 203 from tuberculosis.

Fresno.—Month of June, 1903. Estimated population, 18,000. Total number of deaths 21, including enteric fever 1 and 1 from tuberculosis.

Los Angeles.—Month of June, 1903. Estimated population, 135,000. Total number of deaths 195, including diphtheria 4, enteric fever 5, measles 1, whooping cough 1, and 38 from tuberculosis.

Sacramento.—Month of June, 1903. Estimated population, 30,000. Total number of deaths, 35, including scarlet fever 2, whooping cough 1, and 4 from phthisis pulmonalis.

Stockton.—Month of June, 1903. Estimated population, 18,000. Total number of deaths, 18, including 2 from tuberculosis.

INDIANA.—The monthly bulletin of the Indiana State board of health for June says:

Better health existed in June than in the preceding month, but no improvement appears in comparison with June of 1902. Rheumatism was the most prevalent disease, as it was also in the two preceding months. Tonsillitis and bronchitis were, respectively, second and third in prevalence. Typhoid fever was fourth, having moved up from seventh place in the preceding month. Smallpox was sixth, having

fallen from third place. Diarrhea, as was to be expected, increased in June over May, yet dysentery and inflammation of the bowels show no increase. Diphtheria, pneumonia, and influenza were very much less in June than in May.

Deaths.—There were reported 2,265 deaths, rate 10.9; 306 were under 1 year; 147 were 1 year to 5 years; 60 were 5 to 10; 45 were 10 to 15, and 589, or 27.9 per cent of the total, were 65 and over. The consumption deaths numbered 306, the city rate being 177.7 per 100,000 and the country rate 133.1. Deaths from certain important causes were—pneumonia 124, diarrheal diseases 75, cancer 96, typhoid fever 42, diphtheria 15, scarlet fever 7, whooping cough 24, puerperal fever 8, violence 133, smallpox 4.

Smallpox.—There were reported 247 cases in 49 counties and 4 deaths. This is an improvement, 579 cases in 59 counties with 10 deaths having been reported in May. It is also an improvement, excepting in deaths, as compared with June for 1902, when there were 570 cases in 60 counties with 1 death.

The counties invaded were—Adams 1, Allen 8, Benton 2, Blackford 1, Boone 2, Brown 10, Cass 11, Clark 2, Crawford 3, Daviess 18, Dearborn 1, Decatur 11, Delaware 8, Fayette 2, Floyd 1, Franklin 1, Fulton 5, Gibson 1, Grant 15, Harrison 5, Hendricks 4, Howard 1, Knox 4, Lake 10, Laporte 1, Lawrence 4, Madison 33, Marion 4, Miami 10, Monroe 14, Morgan 1, Noble 1, Orange 5, Park 3, Pulaski 1, Ripley 1, Scott 2, Starke 6, Sullivan 2, Tippecanoe 6, Tipton 6, Vanderburg 2, Vermilion 5, Vigo 15, Warren 2, Wayne 1, Wells 4, White 4, Whitley 3.

Typhoid fever.—This disease shows an increase over May, the rates being for June 20.3 per 100,000 and for May 17.8. This agrees with the prevalence reports, for they show that typhoid was fourth in June and seventh in May. There is an increase also this June as compared with June 1902, the rates being respectively 20.3 and 14.

Tuberculosis.—The total of deaths from pulmonary tuberculosis was 306. Other forms of tuberculosis caused 41 deaths. The rate for the first form was 148.3 per 100,000, but in June last year this rate was 122.6.

IOWA—*Des Moines.*—Month of June, 1903. Estimated population, 80,000. Total number of deaths, 56. No deaths from contagious diseases reported.

Keokuk.—Month of June, 1903. Estimated population, 16,000. Total number of deaths, 17, including 1 from diphtheria.

LOUISIANA—*New Orleans.*—Month of June, 1903. Estimated population, 310,000; white, 227,000; colored, 83,000. Total number of deaths, 536—white, 337; colored, 199, including diphtheria 3, enteric fever 18, measles 2, whooping cough 8, smallpox 1, and 89 from tuberculosis.

MARYLAND—*Cumberland.*—Month of May, 1903. Estimated population, 20,000. Total number of deaths, 38, including smallpox 4, and 5 from tuberculosis.

Month of June, 1903. Total number of deaths, 30, including enteric fever 1, smallpox 2, and 4 from tuberculosis.

MASSACHUSETTS—*Newton.*—Month of June, 1903. Estimated population, 44,873. Total number of deaths, 36, including scarlet fever 1, whooping cough 1, and 5 from phthisis pulmonalis.

MICHIGAN.—Reports to the State Board of Health, Lansing, for the week ended July 11, 1903, from 80 observers, indicate that phthisis pulmonalis, cholera morbus, remittent fever, inflammation of bowels, cholera infantum, and inflammation of brain were more

prevalent, and intermittent fever, pleuritis, erysipelas, whooping cough, diphtheria, and dysentery were less prevalent than in the preceding week. Meningitis was reported present at 3, diphtheria at 21, whooping cough at 22, enteric fever at 25, scarlet fever at 47, measles at 48, smallpox at 49, and phthisis pulmonalis at 201 places.

MINNESOTA—*Mankato.*—Month of June, 1903. Estimated population, 15,000. Total number of deaths 10, including 2 from tuberculosis.

MONTANA—*Helena.*—Month of June, 1903. Estimated population, 13,000. Number of deaths not reported. One death from scarlet fever reported.

NEW YORK—*Buffalo.*—Month of June, 1903. Estimated population, 380,000. Total number of deaths, 406, including diphtheria 7, enteric fever 9, measles 4, scarlet fever 1, whooping cough 3, and 45 from tuberculosis.

OHIO—*Cleveland.*—Month of June, 1903. Estimated population, 420,000. Total number of deaths, 449, including diphtheria 11, enteric fever 39, measles 2, scarlet fever 1, whooping cough 3, and 41 from tuberculosis.

PENNSYLVANIA—*Dunmore.*—Month of June, 1903. Estimated population, 15,000. Total number of deaths 11, including 1 from tuberculosis.

RHODE ISLAND—*Newport.*—Month of June, 1903. Estimated population, 23,000. Total number of deaths 23, including diphtheria 1, and 2 from tuberculosis.

TENNESSEE—*Chattanooga.*—Month of June, 1903. Estimated population, 40,000; white, 27,000; colored, 13,000. Total number of deaths, 41; white 22, colored 19, including measles 1, whooping cough 1, smallpox 1, and 4 from tuberculosis.

Nashville.—Month of June, 1903. Estimated population, 81,803; white, 51,387; colored, 30,416. Total number of deaths, 173—white, 88; colored, 85—including enteric fever 9, measles 5, scarlet fever 1, whooping cough 1, and 19 from tuberculosis.

UTAH—*Salt Lake City.*—Month of June, 1903. Census population, 53,531. Total number of deaths, 51, including diphtheria 2, measles 1, and 3 from tuberculosis.

WASHINGTON—*Tacoma.*—Month of June, 1903. Estimated population, 55,000. Total number of deaths, 37, including diphtheria 1, enteric fever 4, scarlet fever 1, and 7 from phthisis pulmonalis.

Report of immigration at Boston.

FOREIGN AND INSULAR.

BRITISH HONDURAS.

Report from Belize, fruit port.

Acting Assistant Surgeon Carson reports as follows: Week ended July 5, 1903. Present officially estimated population, 8,500; number of deaths, 3; prevailing diseases, mild type of malarial fever; general sanitary condition of this port and the surrounding country during the week, good.

Bills of health were issued to the following-named vessels:

Date.	Name of vessel.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
July 1	Sibun	27	0	0	0
2	Banan	18	0	0	0
3	Anselm	42	9	11	15

CHINA.

Report from Hongkong—Plague and smallpox—Increase in number of plague cases among Europeans.

Passed Assistant Surgeon McMullen reports, June 6, as follows: During the week ended May 30, 1903, 7 vessels were inspected and issued bills of health; 634 crew and 454 passengers (157 cabin and 297 steerage) were inspected; 517 crew and 297 steerage passengers were bathed and 838 pieces baggage disinfected. There were 22 rejections from all causes. During this week there were 123 cases of plague reported in the colony—81 in the town of Victoria and 42 in adjacent districts—with 103 deaths; 1 case of puerperal fever and 1 fatal case of smallpox (Chinese) also reported. Of this 123 cases of plague there were 4 Europeans, 5 Indians, 1 Portuguese, and 2 Japanese, and the remainder Chinese. One thousand one hundred and forty-one cases of plague have been reported in the colony since January 1, 1903. Up to May 16 there had been only 1 European case, and this was probably doubtful; but since this time the number of Europeans who have contracted the disease has increased, and there have been 13 cases up to June 6.

Report from Shanghai—Smallpox.

Acting Assistant Surgeon Ransom reports, June 16, as follows: During the week ended June 13, 1903, two vessels, 160 crew, and 56 cabin passengers were inspected.

The communicable diseases reported to the municipal health department during the week were: Smallpox 1 death, enteric fever 2 cases, diphtheria 5 deaths. The total mortality reported was 3 foreigners and 127 natives.

COLOMBIA.

Report from Bocas del Toro, fruit port—Smallpox—Vaccination.

Acting Assistant Surgeon Osterhout reports as follows: Week ended July 7, 1903. Present officially estimated population not obtainable; number of cases of smallpox during the week, 2; 1 death; number of deaths from other causes, 1; prevailing diseases, malarial fever and smallpox. The epidemic of smallpox is decreasing, undoubtedly due to the enforced vaccination. General sanitary condition of this port and the surrounding country during the week, not good.

Bills of health were issued to the following-named vessels:

Date.	Name of vessel.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
July 1	Beverly	38	0	0	0
2	Fort Gaines	23	0	0	0
4	Belvernon	20	0	0	0

COSTA RICA.

Report from Limon, fruit port—Yellow fever.

Acting Assistant Surgeon Gruver reports as follows: Week ended July 9, 1903. Census population, 4,000; number of cases of yellow fever, 3—deaths, 2; number of deaths from other causes, 5; prevailing diseases, yellow fever and a fever called here bilious remittent fever, which is very rapidly fatal; general sanitary condition of this port and the surrounding country during the week, not good. Walker Bannister, an American employed as conductor on the Northern Railroad here, died of yellow fever July 3.

Bills of health were issued to the following-named vessels:

Date.	Name of vessel.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
July 3	Algiers	32	0	0	0
4	John Wilson	18	8	0	0
6	Valencia	45	0	0	0
8	Preston	30	0	0	0
8	Buenos Aires[a]	104	0	69	0
9	Appomattox	44	0	0	0

[a] *Buenos Aires's* bill of health from Habana called for 104 passengers. Twenty-four disembarked here. When passengers were examined only 69 were on board; discrepancy of 15 unaccounted for and was noted on certificate to bill of health issued at this station for Ponce, P. R.

CUBA.

Report from Cienfuegos—Inspection of vessels—Mortality statistics—Prevalence of mosquitoes.

Acting Assistant Surgeon McMahon reports, July 8, as follows: During the week ended July 4, 1903, 4 bills of health were issued to vessels going to ports in the United States. All were in good sanitary condition; no sickness.

Mortuary report for this week is as follows: Tuberculosis 3, paludism 2, pernicious fever 1, meningitis 1, other causes 10; total 17.

Owing to the heavy rains that are falling here every day now the city is cleaner than it has been for some time. The mosquitoes are very bad, however, and all varieties are present in abundance. Reports from the surrounding country are very good regarding health conditions.

Sanitary condition of Cienfuegos.

The following is received from Consul Baehr under date of July 7, 1903:

The population of Cienfuegos and its environs is 36,500. The streets are wide and straight, and traverse the city from north to south and from east to west. The paving of the streets, which was accomplished during the intervention of the United States, is of a sort of macadam; several coverings of stone and a capping of crushed rock and sand, the whole being compressed by a steam roller. Not all the streets were so paved, but the Ayuntamiento has recently approved a plan for the paving of those still remaining in their former condition. None of the streets as yet have underground sewerage. The streets are swept twice a day and the refuse is taken in carts to the city dumping ground. In this work 30 or 35 men are employed.

Garbage from the dwellings is gathered from 11 p. m. to 5 a. m. in the central part of the city, and from 5 to 10 a. m. in the outlying parts of the city. The garbage is deposited and burnt daily at a point outside the city limits.

The excrements from closets is disposed of in the same manner as during the American intervention, and is taken in barrels securely closed to the dumping ground above mentioned. After each usage the barrels and carts are washed and disinfected. After the cleaning of a pit a solution of either creoline or chloride of lime is poured into it. This work is done from 11 a. m. until 4 p. m.

With reference to the public water supply, the city has an aqueduct of rather limited capacity. This water has been analyzed and pronounced by those in authority to be pure and serviceable.

The slaughterhouse is in a very unsanitary condition owing to its construction and situation, which make it practically impossible to observe due cleanliness. It is situated in the shore of the bay, the waste matter is allowed to fall into the water, and there is no current to carry it away. The public markets are not built for the purpose and are so utterly worthless that no changes or improvements can be suggested, the only remedy being to build new ones.

The cemetery is situated at the west and is in good sanitary condition. It is forbidden to bury as before in those wall sections common to Spanish-American countries.

The health of the town is moderately good. No case of yellow fever has originated in this locality since March, 1901. In June, 1902, one case of yellow fever was brought to this port from Vera Cruz, Mexico, but the case was cured and, owing to prompt action on the part of the authorities, the disease did not become prevalent here. There has been no case of typhoid fever since 1900, and no smallpox since 1899. In 1900 the mortality was 27.54 per thousand; in 1901, 24.23 per thousand; in 1902, 20.67 per thousand.

The health department employs 4 physicians for the poor of the town, 8 more for the same service in the outlying wards of the municipal districts, 5 inspectors of the town who inspect house by house, and still various other inspectors or supervisors, all at the direct orders of a chief. As soon as contagious disease occurs, if the patient has means of being well assisted in his own house, the dwelling is marked, notice is given to the family doctor, and the house is duly observed by the sanitary employees and municipal physician. Vaccination and revaccination are constantly attended to.

The Ayuntamiento has in contemplation the construction of an aqueduct from the Hanabanilla River, 40 miles distant, a sewerage system, slaughterhouse, and a market. It is expected these projects will soon be realized.

Report from Habana—Inspection of vessels—Mortuary statistics—Case of fever on American steamship Esperanza diagnosed as dysentery.

Acting Assistant Surgeon Echemendia, in temporary charge, reports, July 9 and 13, as follows:

Week ended July 4, 1903.

Number of health certificates issued	164
Vessels inspected and issued bills of health	24
Crew of outgoing vessels inspected	981
Passengers of outgoing vessels inspected	647
Pieces of baggage inspected	201
Pieces of freight inspected	2,007
Pieces of express inspected	18
Pieces of baggage disinfected	15

The case of fever in the person of a seaman who was removed from the American steamer *Esperanza* on July 1 was diagnosed as dysentery. The patient has recovered and was discharged a few days ago.

Mortuary report of Habana, Cuba, for week ended July 4, 1903.

Disease.	Number of deaths.
Meningitis	8
Enteritis	4
Tuberculosis	14
Cancer	2
Infectious fever	3
Enteric fever	4
Pneumonia	1
Pernicious malarial fever	2
Gastro-enteritis	1
Broncho-pneumonia	1
Bronchitis	1

Total deaths from all causes, 96.

History of yellow-fever case from steamship Vigilancia, from Progreso.

Vicente Barón, a Spaniard, 37 years of age, arrived at Habana from Progreso on board of the American steamer *Vigilancia*, and was not sent to the quarantine camp at Triscornia for detention for the reason that he brought an immune certificate, issued by the Cuban medical officer at Progreso, Dr. Plá, based on ten years' residence in a yellow-fever zone. The man went to the house of a friend or relative in Ynquisidor street, No. 29, where he was taken sick with fever on the following day, July 8. He was removed to Mercedes Hospital on July 9, and as the case was regarded as suspicious by the hospital surgeons he was transferred to Las Animas Hospital, where the yellow-fever commission pronounced the case yellow fever.

Death of yellow-fever case from steamship Vigilancia from Progreso.

[Cablegram.]

HABANA, CUBA, *July 16, 1903.*

WYMAN, *Washington:*

Case of yellow fever reported in my cable of July 13 died yesterday. Necropsy confirmed diagnosis.

ECHEMENDIA.

NOTE.—This case was landed July 7 at Habana from the Vigilancia en route from Progreso to New York, and officially declared yellow fever. See Public Health Reports, July 17, 1903, page 1152.

Report from Santiago—Mortality statistics.

Acting Assistant Surgeon Wilson reports, July 8, as follows: During the week ended July 3, 1903, bills of health were issued to 4 vessels bound for the United States. No quarantinable disease has been reported.

Mortality statistics for the week ended July 3, 1903.

Cause of death.	Number.
Pernicious fever	1
Bilious remittent fever	1
Remittent fever	1
Tubercle of lungs	1
Tubercular peritonitis	1
Lympho-sarcoma of breast	1
Meningitis	2
Tetanus (infantile)	1
Organic heart disease	1
Capillary bronchitis	1
Pneumonia	1
Pulmonary apoplexy	1
Gastric ulcer	1
Diarrhea and enteritis (under 2 years)	10
Diarrhea and enteritis (chronic)	2
Chronic cystitis	1
Stab wound	1
Total	28

Annual rate of mortality for the week, 33.86 per 1,000; estimated population, 43,000.

GERMANY.

Report from Berlin—Plague and cholera in various countries.

Consul-General Mason reports, July 4, as follows:

Plague.

Egypt.—Between the 13th and 19th of June, inclusive, there were registered in the whole of Egypt 8 fresh cases of plague (with 5 deaths), namely: In Alexandria 1 new case (3 deaths); in Port Said 1 new case (1 death); in Damiette 1 case (1 death); in Beni Mazar 1 case; in the Tukh district of the Province Galioubieh 4 cases.

British East India.—The following table gives the number of deaths from plague registered in British India (exclusive of the Bombay Presidency):

	March 18 to April 15.	April 15 to May 3.
In Bengal (exclusive of Calcutta)	13,907	5,222
In Punjab	17,180	68,753
United Provinces	16,559	10,712
Central Provinces	3,634	900
Mysore	579	238
Hyderabad	1,769	762
Berar	515	209
Central India	2,020	1,141
Radjputana	670	274
Total, outside of Bombay Presidency	86,833	88,211

French Indo-China.—Between the 27th of May and 9th of June inclusive, there were registered in Hanoi 19 deaths from plague.

Japan.—In Formosa during the first four months of the current year there were registered 449 plague cases (with 353 deaths), exclusively among Chinese and Japanese.

Supplementary report, July 6, 1903.

Plague.

British South Africa.—In Cape Colony, according to the official weekly bulletins, there were registered between the 17th and 30th of May, in Port Elizabeth 7 new plague cases, in East London 6 cases, and in King Williams Town also 6 cases.

Plague rats continued to be found during the last week of May in Port Elizabeth, King Williams Town, and in Queenstown.

In Natal, according to the official weekly bulletin, there occurred during the period from the 10th to the 16th of May in Durban and Maritzburg 5 new cases of plague.

New South Wales.—On the 22d of June a case of plague was officially registered in Sydney.

West Australia.—According to a report dated May 26, a new case of plague has occurred in Freemantle.

Plague and Cholera.

British India.—In Calcutta during the week ended May 23, there were registered 47 deaths from plague and 71 deaths from cholera.

Cholera.

Turkey.—According to a report dated June 16, cholera has almost been stamped out in Damascus, while in the villages in the vicinity the disease continued to spread. Cases have been reported from the villages of Dama, Katana, Dschede, Beytarie, and others. In the last-named village there occurred between the 6th and 13th of June 26 cases of cholera, of which 23 ended in death. In the village of Kara (half way between Damascus and Homs, on the caravan route from Damascus to Aleppo) 13 cases of cholera occurred between the 8th and 14th of June.

French Indo-China.—Between the 27th of May and the 2d of June five deaths from cholera occurred in Saigon. In Gocong 2 Europeans died of cholera. In Cholon (Cochin-China) 3 natives succumbed to the disease.

Death rate of Berlin.

The death rate of Berlin for the week ended June 20 was considerably higher than that of the foregoing week, amounting, calculated on the year, to 13.9 per 1,000. Of the large German cities, two-thirds showed less favorable figures than Berlin. The following places, among others, showed a considerably higher death rate than Berlin, viz, Hamburg, Leipzig, Dresden, Hanover, Braunschweig, Cologne, Munich, Nuremberg, Carlsruhe, Halle, Breslau, Konigsberg, Stettin, as well as Paris and Vienna. The following towns had a lower death rate than Berlin, namely, Stuttgart, Bremen, Kiel, Charlottenburg (with 11.9), Schoneberg (with 10.6 per 1,000), and also London. The increase in the mortality was more noticeable among children in the first year of life than among the higher age classes. The infant mortality rate rose from 3.1 in the previous week to 4.1 per year and mille, but was thereby only the half of Munich, Stettin, and Chemnitz. There was a slight increase in acute intestinal diseases, which caused 55 deaths. Acute diseases of the respiratory organs claimed 40 victims. There were registered 75 deaths from phthisis pulmonalis and 34 deaths from cancer. There were 2 deaths from scarlet fever, against 10 in the foregoing week. Further, there occurred 1 death from diphtheria, 8 deaths from measles, 8 cases of typhoid fever (with 1 death), and 10 persons died by violence.

GUATEMALA.

Report from Livingston, fruit port.

Acting Assistant Surgeon Peters reports as follows: Week ended July 6, 1903. Present officially estimated population, 3,500; number of deaths, 2; prevailing diseases, malarial; general sanitary condition of this port and the surrounding country during the week, good.

Bills of health were issued to the following-named vessels:

Date.	Name of vessel.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
June 30	Banan	18	0	0	0
30	Anselm	41	8	0	15

The *Anselm* cleared from Puerto Barrios.

HAWAII.

Quarantine transactions at Honolulu and Hilo.

Passed Assistant Surgeon Cofer, chief quarantine officer for Hawaii, reports, July 6, as follows:

Honolulu.

Week ended July 4, 1903. Number of vessels inspected, 9; vessels disinfected, 3; crew inspected, 122; stowaways inspected, 2; cabin passengers inspected, 121; steerage passengers inspected, 111; pieces of steerage passengers' baggage disinfected, 109; pieces of crews' baggage disinfected, 83; pieces of hides and pelts disinfected, 1,775.

Hilo.

Week ended June 27. Number of steamers disinfected, 1; sailing vessels disinfected, 1; cabin passengers inspected and passed, 78; crew inspected and passed, 54; pieces of crews' baggage disinfected, 42.

Two plague deaths at Honolulu.

[Telegram.]

HONOLULU (via San Francisco, Cal., July 18),
June 26, 1903.

WYMAN, *Washington:*

There was a death from plague on June 24; also June 25.

COFER.

HONDURAS.

Report from Ceiba, fruit port.

Acting Assistant Surgeon Robertson reports as follows: Week ended July 11, 1903. Present officially estimated population, about 4,000; 1 death. Prevailing diseases, malarial, of mild type. General sanitary condition of this port and the surrounding country during the week, good.

Bills of health were issued to the following-named vessels:

Date.	Name of vessel.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
July 5	Habil	15	0	0	0

Plague in Mauritius.

A telegram from the governor of Mauritius states that during the week ended June 18, 1903, there were two cases of bubonic plague on the island.

JAPAN.

Report from Yokohama—Plague in Formosa and Yokohama.

Assistant Surgeon Moore reports, June 25, as follows: During the week ended June 20, 1903, 3 vessels, having a total personnel of 352 crew and 675 passengers, were inspected; 209 steerage passengers were bathed, and 365 pieces of baggage were disinfected.

The official report of contagious diseases in Yokohama for the above period shows 3 new cases of plague with 2 deaths. These cases were previously reported by me under date of June 19. Unofficial information indicates that 2 additional fatal cases of plague have occurred in Yokohama during the present week.

Further returns regarding the prevalence of plague in Formosa show that from January 1 to June 17 of the present year there had

occurred in that island 750 cases with 606 deaths, as compared with 1,795 cases with 1,352 deaths for the corresponding period of last year, and 3,481 cases with 2,619 deaths for the same period of 1901.

MEXICO.

Report from Progreso—Sanitary conditions at Progreso and Merida—Yellow fever.

Acting Assistant Surgeon Harrison reports, July 12:

During the week ended July 11, 1903, bills of health were issued to the following-named vessels:

July 5, American steamship *Vigilancia*, New York via Habana: Crew, 96 (good). Passengers, Vera Cruz to Progreso, 32; Progreso to New York, 8; Progreso to Habana, 35; transit, 26; 69 (good). Water.

July 7, Spanish steamship *Onton*, Port Arthur: Crew, 29 (good). Water.

July 7, British steamship *Vimeira*, Boston: Crew 25 (good). Water.

July 11, American sailing vessel *Rita Cue*, New Orleans via Fonda: Crew, 6.

Sanitary conditions in Progreso—Yellow fever.

The sanitary conditions of Progreso are not good. Yellow-fever cases are not invariably removed to the pesthouse or otherwise isolated, nor does it appear that all cases of that disease are promptly reported. From the best information I can gather as to the number of cases here since my arrival, May 20, there have been only three, two of which were sent to the pesthouse, the third remaining in private residence in the town.

The people of Progreso appear to take no interest in the prevention of the fever nor in the matter of mosquito destruction. Recent rains have been followed by marked increase in the number of mosquitoes. There are many open cisterns, shallow wells, and pools within the limits of the town, or very near. Moreover, I find that outside the business or central part of Progreso, garbage, dead animals, and trash are not regularly removed, while on the edge of the town to the southward I find very unsanitary conditions in the dumping ground—filth and carrion—and on the sea beach, the northern edge of town, is an accumulation of rotting seaweed, which develops a very foul odor, carried through the whole town by the prevailing sea breeze. There is some effort made to collect and bury this rotting weed.

The mortality report for Progreso will be forwarded next week. Since last report there has occurred one more case of yellow fever, originating in town—a native Yucatan woman.

Sanitary conditions at Merida—Yellow fever.

Merida is reported to be in very bad sanitary condition and to be continuously infected with yellow fever, with two to five deaths a week from that disease. I have been informed recently that leprosy is quite frequent. It is said, moreover, that there are several cases of the same disease in Progreso.

In a recent daily paper of Merida there appeared an appeal from the governor of the State to the health authorities urging the adoption of active measures for the arrest and prevention of yellow fever in the State of Yucatan and for the destruction of mosquitoes.

NICARAGUA.

Report from Bluefields, fruit port.

Acting Assistant Surgeon Goodman reports as follows: Week ended July 4, 1903. Present officially estimated population, 4,000; number of deaths, 2; prevailing disease, malarial fever. General sanitary condition of this port and the surrounding country during the week, good.

Bills of health were issued to the following-named vessels:

Date.	Name of vessel.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.

PHILIPPINE ISLANDS.

Reports from Manila—Plague and smallpox.

Assistant Surgeon Heiser, chief quarantine officer for the Philippine Islands, reports, May 23 and 30 and June 8, 9, 12, 17, and 18, as follows:

Week ended May 23, 1903: 4 new cases plague, 5 deaths; 3 cases smallpox, 1 death.

Week ended May 30, 1903: 5 new cases plague, 4 deaths; 2 new cases smallpox, 6 deaths.

Week ended June 6: Four new cases plague, 3 deaths; 5 cases smallpox, 1 death.

Week ended June 13, 1903: Six cases plague, 7 deaths; 2 cases smallpox, 1 death.

Cholera situation in Manila improving—Examination of water from Pasig River.

The cholera situation has been improving steadily. At the present time there are only a few cases daily.

The investigation made by Assistant Surgeon Long on the whole confirmed the opinion expressed in the report of May 26, namely, that the majority of the cholera cases could be traced to the shallow side of the Pasig River. Numerous samples of water were taken from

the river and examined bacteriologically. The samples that gave the most pronounced cholera reactions were those taken from places in the river at which cholera-infected vessels had been lying. It is much to be regretted that the great amount of work and the few officers on duty here prevented us from making the water examination complete. From a scientific standpoint it can only be considered as preliminary. The insular board of health has been requested to continue the examination. Their investigation has so far confirmed our work that they are now discussing plans for ridding the river of infection.

The army transport service is carrying out rigid rules directed against using water from the Pasig River, and since this practice was adopted no further cases of cholera have appeared on their vessels.

Weekly report of the outgoing quarantine at Manila, P. I., on account of the prevalence of cholera and plague in Manila, weeks ended May 23 and 30, 1903.

	Week ended—	
	May 23.	May 30.
Vessels remaining in quarantine from last week	0	0
Vessels entering quarantine during the week	0	0
Vessels discharged from quarantine	0	0
Vessels sailing without quarantine inspected and passed	16	15
Crew entering quarantine during the week	0	0
Cabin passengers entering quarantine during the week	0	0
Steerage passengers entering quarantine during the week	0	0
Crew inspected during the week	121	100
Passengers inspected during the week	122	93

Pieces of baggage disinfected	134	81
Pieces of baggage inspected and passed	12	17
Vessels remaining in quarantine	0	0

Quarantinable diseases in Cebu, May, 1903.

Assistant Surgeon Fox reports, under date of June 4, through the chief quarantine officer for the Philippine Islands, as follows:

During the month of May, 1903, the following quarantinable diseases were reported to the local authorities:

	Cases.	Deaths.	In hospital.
Cholera	29	25	.....
Smallpox	22	1	.....
Leprosy	4	3	214

Report from Jolo—Cholera apparently extinct in the Sulu group.

Assistant Surgeon Amesse reports, June 1, through the chief quarantine officer for the Philippine Islands, as follows:

During the past four weeks no cases of cholera have been reported on this island, and to the best of my knowledge the epidemic has subsided throughout the entire Sulu group.

The various market places, closed for many months, have been reopened, and both foreign and domestic trade have assumed their normal proportions.

I purpose in a few days making a personal inspection of the ports of Siasi and Bongao and recommending such sanitary measures as seem required.

Foreign and insular statistical reports of countries and cities—yearly and monthly.

AUSTRALIA—*Queensland—Brisbane.*—Month of April, 1903. Estimated population, 119,428. Total number of deaths, 135, including diphtheria 3, enteric fever 2, and 1 from plague.

BAHAMAS—*Dunmore Town.*—Two weeks ended July 3, 1903. Estimated population, 1,232. Two deaths. No contagious diseases.

Governors Harbor.—Two weeks ended July 4, 1903. Estimated population, 1,500. No deaths and no contagious diseases.

Green Turtle Cay—Abaco.—Two weeks ended July 1, 1903. Estimated population, 3,314. No deaths and no contagious diseases.

Nassau.—Two weeks ended July 8, 1903. Estimated population, 12,534. Number of deaths not reported. No contagious diseases reported.

BRITISH GUIANA—*Demerara—Georgetown.*—Month of May, 1903. Estimated population, 36,567. Total number of deaths, 243, including diphtheria 1, and 20 from tuberculosis.

CANADA—*British Columbia—Victoria.*—Month of June, 1903. Estimated population, 21,000. Total number of deaths, 24, including enteric fever 2, scarlet fever 1, and 1 from tuberculosis.

JAMAICA—*Kingston.*—Month of June, 1903. Estimated population, 52,475. Total number of deaths, 45, including 6 from phthisis pulmonalis.

NORFOLK ISLAND.—Months of March and April, 1903. Estimated population, 971. No deaths and no contagious diseases.

Cholera, yellow fever, plague, and smallpox, June 27, 1903, to July 24, 1903.

[Reports received by the Surgeon-General Public Health and Marine-Hospital Service from United States consuls through the Department of State and from other sources.]

[For reports received from December 27, 1902, to June 26, 1903, see PUBLIC HEALTH REPORTS for June 26, 1903.]
